ELMO USA BOLSTERS SCHOOL SAFETY AND SECURITY WITH NEW *SUV-CAM PRO* RECORDING SYSTEM

ELMO USA's SUV-Cam Professional micro video recording system provides school safety and security personnel with technology specific to patrolling, incident response and reporting, access control, surveillance applications, and training for the protection of students, teachers, faculty and visitors.

The SUV-Cam Pro is a highly capable security tool which is easily concealed, portable, adaptable and very durable. Weighing less than 10 ounces, the unit delivers synchronized audio and video recording at resolution up to 704 x 480 at 1 to 25 fps.

The SUV-Cam Pro can be hand-held or body-worn, attached to a helmet or uniform, or easily installed on a vehicle. The unit's anti-vibration camera head prevents "out-of-focus" output caused by intense movement, and the use of solid state recording media eliminates data loss from "rough handling." Stationary, the SUV-Cam Pro supports scheduled and continuous overwrite recording to maintain surveillance of a building's interior or exterior space, such as a hallway, entryway or parking lot.

Usability is further enhanced with up to three hours of recording in MPEG4 format utilizing a rechargeable Lithium-ion battery and SDHC flash memory card up to 8GB. On AC power the system can record for up to 16 hours on a 32GB SDHC card. (SDHC cards not included)

The SUV-Cam Pro makes it easy to share recorded events through its built-in LCD screen, USB 2.0 and AV interface, or inserting the SDHC card into a PC and viewing through a Windows Media Player.

In addition to security applications, the SUV-Cam Professional can be used in the laboratory and classroom for teaching and presentations, in addition to field trips, dramatic and musical rehearsals and performances, or by an athletic team for practice and competitions.

For more information on ELMO's SUV-Cam Professional, contact Gilbert DeLiso, ELMO USA National Sales Manager, at (516) 501-1400.
